Pratik Chandrakant Borge

Php website host using jenkins pipeline on node

Pipeline:-

```
pipeline{
    agent{
        label 'agent3'
    }
    stages{
        stage("install
            apache"){ steps{
                sh'''
                sudo apt install apache2 -y
                sudo systemctl start apache2
                '''
            }
        }
        stage("removing
            index.html"){ steps{
                sh'''
                sudo rm -rf /var/www/html/index.html
                '''
            }
        }
        stage("install php and cloning from
            git"){ steps{
                sh'''
                sudo apt install php -y
                sudo git clone 'https://github.com/PratikBorge/php.git'
                sudo mv ./php/* /var/www/html
                sudo systemctl restart apache2
                '''
            }
        }
    }
}
```
