Web page host using jenkins pipeline with node.

Pipeline:-

```
pipeline{
    agent{
        label 'agent3'
    }
    stages{
        stage("Installing apache2"){
            steps{
                sh'''
                sudo apt install apache2 -y
                sudo systemctl start apache2
                '''
            }
        }
        stage("Creating index.html file"){
            steps{
                sh'''
                sudo echo "This is my webpage" >> index.html
                '''
            }
        }
        stage("removing the default index.html file"){
            steps{
                sh'''
                sudo rm -rf /var/www/html/*
                '''
            }
        }
        stage("moving our created index.html"){
            steps{
                sh'''
                sudo mv /home/ubuntu/workspace/Tom/index.html /var/www/html
                sudo systemctl restart apache2
                '''
            }
        }
    }
}
```
