Creating S3 Bucket and Uploading artifact into it

Pipeline:-

```
pipeline{
    agent {
        label 'agent3'
    }
    stages{
        stage('Cloning from
            git'){steps{
                sh'''
                sudo git clone 'https://github.com/AnupDudhe/studentapp-ui.git'
                '''
            }
        }
        stage('Maven
            Installation'){steps{
                sh '''
                sudo apt update -y
                sudo apt install maven -y
                '''
            }
        }
        stage('Building
            artifact'){steps{
                dir("./studentapp-
                ui"){sh'''
                sudo mvn clean package
                '''
                }
            }
        }
        stage('Installing aws-
            cli'){steps{
                sh'''
                sudo apt install aws-cli -y
                '''
            }
        }
        stage('Creating s3 bucket and upload
            artifact'){steps{
                sh'''
                aws s3api create-bucket --bucket prat123borge --us-east-1
--create-bucket-configuration LocationConstraint=us-east-1
                aws s3 cp ./studentapp-ui/target/*.war  s3://prat123borge
                '''
            }
        }
    }
}
```

Created S3 bucket and uploaded artifact:-
